The Municipality of Mississippi Mills

Drinking Water Quality Management System

The Municipality of Mississippi Mills has developed and implements a Drinking Water Quality Management System (DWQMS) for the drinking water distribution system owned and operated by our Municipality. The main purpose of the DWQMS is to enhance the management and operation of the municipal drinking water system, ensuring a continual supply of safe drinking water to all consumers.

The DWQMS has been developed in accordance with current legislative and regulatory requirements established by the Ontario Ministry of Environment, Conservation, and Parks as part of their Municipal Drinking Water Licensing Program.

The Roads and Public Works Department, its Management, and entire staff are committed to the principles and objectives set out in our Quality Management System (QMS) Policy.

The Roads and Public Works Department's Policy is to:

- Meet all regulatory requirements to supply consumers with safe drinking water
- Maintain and continuously improving its quality management system
- Ensure policy is in a form that will be easy to communicate to owner, public, and staff
- Is appropriate for the size and type of drinking water system

Management and staff will act to ensure the implementation of this Policy and will monitor progress of the Quality Management System (QMS).

For more information about the Drinking Water Quality Management System please contact the Roads and Public Works Department at 613-256-2064.
