

## **Transportation Master Plan FAQ**

### **What is a Transportation Master Plan?**

A Transportation Master Plan (TMP) is a high-level strategic planning document guiding the planning, expansion, and management of multi-modal transportation system to its planning horizon. A TMP identifies the policies and projects that will support the vision and meet short-and long-term transportation needs.

### **Why is the Transportation Master Plan Important?**

The Municipality of Mississippi Mills is projecting long-term growth and the TMP will develop a practical and affordable plan to meet the transportation needs of the municipality's existing and future residents.

### **What types of services will be considered in the plan?**

The Transportation Master Plan will consider:

- population growth
- opportunities to connect communities
- vehicle mobility
- active transportation
- safety and accessibility

It's important to note that the TMP does not cover a road condition assessment. Concerns with existing road surface quality, including potholes, should be reported directly to the Public Works department.

### **How is the community being consulted for the plan?**

Consultations for the plan include:

- Meetings with municipal staff and members of Council
- Meetings with community and agency stakeholders
- In-Person Public Information Centres
- Online Community Transportation Survey

### **How can I share my ideas about the existing and specific issues?**

You can submit your questions, comments and ideas directly to the project team under "Contacts" on the [TMP webpage](#). Be sure to check back for updates or share any new ideas. Later in the process, we will share a draft Transportation Master Plan for the community to review and provide feedback.
